

### **Changes to Group06 Project**

1. Pollen Information - Our original idea had been to add information concerning pollen information for suffers of hayfever. It quickly became apparent that this data is not widely available/reliable and so it had to be dropped from our project. We instead focused much more on the pollution level data that was made available to us and the adverse effect certain weather can have on those suffering from respiratory-related issues.
2. Info-boxes for the detailed pollution information screen, with messages tailored for specific weather combinations - this would have taken too long for this project, with a lot of added if-statements, so we prioritized getting the most vital information displayed. It could be done without much trouble if we had a few more days.
